

# Acquisition Legacy Estate Assessment Brief

**Organization:** Aster Retail Acquisition Office

**Scenario:** Acquisition Legacy Estate

**Classification:** synthetic test evidence only.

System summary: Incomplete newly acquired estate with conflicting proxy and VPN naming, scanned architecture notes, and unknown ownership.

Risk goal: Ambiguous AI-heavy extraction and conflicting evidence.

Key findings: SSL VPN with RC4 compatibility; RSA-1024 appliance certificate; gateway/proxy alias conflict; unknown ownership and incomplete evidence.

Expected scan behavior: Critical review-needed findings. Gemini/batch analysis should connect old proxy, internet VPN, SSL, RC4, RSA-1024, and owner-unknown nodes with confidence below perfect certainty.

Evidence quality warning: architecture documents are incomplete and use conflicting names including old-proxy, GW01, and legacy gateway.

Primary action: validate whether vpn.aster-acquired.example.com and GW01 are still active, then disable SSL, RC4, TLS 1.1, and RSA-1024.

Expected UX: findings should be critical but marked as requiring owner review because source confidence is incomplete.

No credentials, private keys, tokens, real customer data, or live infrastructure references are included.
