

PQC-Ready AI Platform Assessment Brief

Classification: synthetic anonymous test evidence only.

Scenario folder: 04-pqc-ready-ai-platform

System summary: AI inference platform with a mostly quantum-safe target architecture and one historical ambiguous RSA reference for review handling.

Key crypto and protocol terms: RSA, TLS 1.3, ML-KEM, ML-DSA, AES-256, SHA-384

Expected scan behavior: Low effective risk overall. ML-KEM, ML-DSA, AES-256, SHA-384, and TLS 1.3 should dominate; historical RSA should be visible but described as archived context.

Use architecture-diagram.png and process-flow.png for visual/OCR topology and flow extraction.

No organization branding, real product names, credentials, private keys, payment tokens, PINs, account numbers, customer data, or live infrastructure references are included.
