

QR Merchant Switch Assessment Brief

Classification: synthetic anonymous test evidence only.

Scenario folder: 06-qr-merchant-switch

System summary: Synthetic regional QR merchant payment switch inspired by QR payment rail: one QR acceptance path for banks, e-wallets, acquirers, merchant apps, and real-time merchant notifications.

Key crypto and protocol terms: TLS 1.2, ECDSA-P256, ECDH, RSA-2048, TLS 1.3, ML-KEM, AES-256, SHA-256, ECDSA, RSA

Expected scan behavior: Internet-edge and partner-facing findings should rank high where TLS 1.2, ECDSA, ECDH, and RSA signing appear near QR payment ingress and merchant notification APIs.

Use architecture-diagram.png and process-flow.png for visual/OCR topology and flow extraction.

No organization branding, real product names, credentials, private keys, payment tokens, PINs, account numbers, customer data, or live infrastructure references are included.
