

Direct Bank Gateway Assessment Brief

Classification: synthetic anonymous test evidence only.

Scenario folder: 07-direct-bank-gateway

System summary: Synthetic real-time online banking payment gateway inspired by Direct Bank Gateway: merchant checkout, bank selection, bank redirect, authorisation, debit confirmation, and merchant receipt notification.

Key crypto and protocol terms: RSA-3072, TLS 1.2, RSA, ECDH, TLS 1.3, ML-KEM, AES-256, SHA-384

Expected scan behavior: Public merchant checkout endpoints and bank redirect endpoints should elevate TLS 1.2 RSA/ECDH findings; internal AES-256 and SHA-384 controls should remain low risk.

Use architecture-diagram.png and process-flow.png for visual/OCR topology and flow extraction.

No organization branding, real product names, credentials, private keys, payment tokens, PINs, account numbers, customer data, or live infrastructure references are included.
