

Card and Cash Switch Assessment Brief

Classification: synthetic anonymous test evidence only.

Scenario folder: 09-card-atm-switch

System summary: Synthetic domestic debit and shared ATM switching platform inspired by Domestic Debit and Shared Cash Network: POS acquiring, ATM withdrawals, issuer routing, token validation, and cash-out controls.

Key crypto and protocol terms: ECDH, TLS 1.1, RSA-2048, DSA, AES-256, TLS 1.3, ML-KEM, RSA

Expected scan behavior: POS/acquirer and ATM gateway findings should be high where RSA, DSA, ECDH, and TLS 1.1 are present; token vault AES-256 should remain low risk.

Use architecture-diagram.png and process-flow.png for visual/OCR topology and flow extraction.

No organization branding, real product names, credentials, private keys, payment tokens, PINs, account numbers, customer data, or live infrastructure references are included.
