

Wholesale Settlement Rail Assessment Brief

Classification: synthetic anonymous test evidence only.

Scenario folder: 10-wholesale-settlement

System summary: Synthetic wholesale RTGS participant gateway inspired by Wholesale Settlement Rail concepts: high-value interbank funds transfer, securities settlement, participant terminal access, settlement-message messaging, and recovery-site operations.

Key crypto and protocol terms: TLS 1.2, RSA-2048, ECDSA-P256, SHA-256, AES-256, RSA-3072, ML-DSA, RSA, ECDSA

Expected scan behavior: Even private participant links should rank high because RSA/ECDSA/TLS 1.2/legacy token controls sit on high-value settlement paths; exposure should be PARTNER or INTERNAL rather than public internet.

Use architecture-diagram.png and process-flow.png for visual/OCR topology and flow extraction.

No organization branding, real product names, credentials, private keys, payment tokens, PINs, account numbers, customer data, or live infrastructure references are included.
